How CBD Gummies Made by Canna Bee Function?

An intricate network of receptors and neurotransmitters called the endocannabinoid system (ECS), which **Canna Bee CBD Edibles UK Supplement** interacts with, controls a number of body processes including pain, mood, sleep, and immunological response. Two primary receptors are part of the ECS:

- **Mainly present in the brain and central nervous system,** CB1 receptors affect mood, hunger, and memory.
- **CB2 receptors are involved in pain management and inflammation and are found in immune cells and the peripheral nervous system.**

Indirectly affecting these receptors, CBD helps the body maintain balance, or homeostasis. The CBD Gummies is taken up by the digestive system, gets into the circulation, and combines with the ECS to cause its effects.
